

The Final Piece Just Fell Into Place.

Allen-Bradley

The compact Allen-Bradley 1336 SPIDER™ AC drive from Rockwell Automation is creating a huge stir in the synthetic fiber industry.

The 1336 SPIDER drive lets single fiber machines spin multiple products simultaneously. And it's designed to ride through power dips up to 500ms to keep your process up and running continuously.

What's more, the 1336 SPIDER drive can be woven into your plant's communications web. Its open architecture streamlines communication to operator interface and control devices. Plus, the integrated high-speed communication interface updates drive parameters and commands in just milliseconds! And of course it's Allen Bradley, the most trusted name in industrial automation.

We'll make it easy to drop the final piece of the complete automation solution into place. Just call **1-800-223-5354, ext. 0917**, fax us at 1-612-942-6940, or visit us at www.ab.com/drives/spider.
