

PowerFlex 70 and 700 Migration from Standard Control to Vector (Enhanced) Control

PC based conversion tool

Drive Executive version 4.01 (scheduled for release by mid December, 2005) now supports the following parameter set conversions:

- PowerFlex 70 Standard Control to PowerFlex 70 Enhanced Control
- PowerFlex 70 Standard Control to PowerFlex 700 Standard Control
- PowerFlex 70 Standard Control to PowerFlex 700 Vector Control
- PowerFlex 700 Standard Control to PowerFlex 700 Vector Control
- PowerFlex 700S Phase 1 Control to PowerFlex 700S Phase 2 Control

HIM CopyCat support

PowerFlex 70

The PowerFlex 70 Enhanced Control with firmware version 2.002 and later accepts the parameter settings from PowerFlex 70 Standard Control during a HIM copycat download.

PowerFlex 700

The 700VC Series B can accept a Series A parameter set during a HIM copycat download (in the non block transfer mode), but cannot accept settings from a 700 Standard (via HIM copycat). There are no plans for a version which would accept the 700 Standard due to feasibility.
