- FCR Unit (Field Current Regulator)
- Invertron Drive Series
- Maxitron Drive Series
- Minitron Drive Series
- SD3000 Drive Series
- Spindrel Drive Series
- E20 Processor

After more than two decades of sales and support, Rockwell Automation's Customer Support and Maintenance (CSM) division is announcing the "Last Time Repair" designation for the attached product groups. We anticipate having components available for remanufacturing until **October 31<sup>st</sup> 2009**. In addition to remanufacturing services, spares and component related to listed products will be available for sales until **November 30<sup>th</sup> 2009**. Attached is a product list with part-ID, description and technical data to identify relevant products.

Customers currently using these products should contact their local Rockwell Automation representative to develop a migration/support strategy. A variety of product alternatives are available from the Allen-Bradley PowerFlex portfolio. The PowerFlex family of drives continues to set the standard in the marketplace for its high performance in a small package, great delivery, and coverage of a broad range of ratings and control options at significantly lower list prices than the more mature legacy products.

As always, we will make every attempt to satisfy our customers' needs. Please feel free to contact us with any concerns or to discuss contract options.
